

Mauricésar Barbosa

CTO · Technical Lead · AI Researcher · Technology Educator

Technology leader with a profile spanning software engineering, artificial intelligence, computer vision research, product-oriented architecture and technical education. Experienced in connecting strategy, engineering execution and applied innovation to deliver software and AI solutions with practical impact.

POSITIONING

TARGET ROLES

CTO · Technical Lead · AI / Software Lead

Leadership roles that combine architecture, product, AI and team enablement.

CORE DOMAINS

Software · AI · Education · Healthcare research

Strong fit for organizations building applied, useful and scalable technology.

CORE STACK

- React
- TypeScript
- Python
- PyTorch
- Computer Vision
- Object Detection
- Databases
- APIs
- Software Architecture
- AI Strategy

STRENGTHS

Technology leadership

Architecture, technical direction, team mentoring and execution strategy.

Applied AI

Machine learning, computer vision, model evaluation and healthcare-oriented research.

Education and communication

Teaching, mentoring and translating complex technical topics into practice.

PROFESSIONAL EXPERIENCE

Chief Technology Officer · Carper Solutions

Current

Technology strategy, architecture and AI-driven solutions

- Leads technology strategy, software architecture and engineering direction for digital solutions.
- Connects product conception, AI opportunities and scalable implementation decisions.
- Supports teams and projects through technical leadership, delivery quality and innovation planning.

Technical Lead · Hub FDS

Jun 2026 - Present

Software, AI and education technology leadership

- Leads technical work on projects focused on education, professional training and digital transformation.
- Guides architecture, implementation strategy and technical mentoring across software and AI initiatives.
- Bridges product thinking, engineering practices and learning impact in educational technology contexts.

Technology Instructor · SENAC Alagoas

Current

Programming, web development, databases, software engineering and AI

- Trains students and professionals in practical technology skills connected to market demands.
- Designs hands-on learning experiences involving software development, databases and AI concepts.
- Mentors students through project-based practice, technical reasoning and employability-oriented learning.

AI Researcher · PPGI / UFAL

In progress

Computer vision and medical image analysis

- Researches intelligent models for medical image analysis and diagnostic support.
- Works with object detection, model evaluation and computer vision workflows.
- Focuses on applied research with practical relevance for healthcare technology.

SELECTED PROJECT THEMES

AI and software solutions

- Digital solutions involving automation, artificial intelligence and technology transformation.
- Architecture and implementation of products that connect business needs with robust engineering.

Computer vision for healthcare

- Research on model evaluation, object detection and medical imaging workflows.
- Interest in reliable AI systems that support evidence-based decision-making.

EDUCATION

Master's in Informatics

PPGI / UFAL · In progress
Research in AI and computer vision applied to healthcare.

Computer Science

Undergraduate degree

Specializations

Artificial Intelligence, Databases, Data Science and Teaching for Technical Education.

Technology for education

- Software and AI solutions that strengthen professional training and learning processes.
- Teaching practice that combines technical rigor, projects and real-world demands.
